# KIILTO PRO MD BLOCK

Unique solution for professional dishwashing

Complete solution for efficient, safe and economical machine dishwashing. The Kiilto Pro MD Block dispensers are attached to the wall and thus free up space in the kitchen. This means that you can work more efficiently.

Furthermore, the Swan-labelled, concentrated products in solid form increase safety and improve the working environment for you and your colleagues.

- ✓ Complete solution
- ✓ Improves the working environment
- ✓ Frees up space in the kitchen
- ✓ Swan-labelled products
- ✓ Increases safety

## CAREFREE DISHWASHING

A well-organized kitchen is essential to ensure a good workflow for cooks, dishwashers and cleaning assistants. But large kitchen appliances and dishwashers quickly take up space in small kitchens, which poses challenges with both safety and efficiency.

Kiilto has developed the Kiilto Pro MD Block dishwashing system, where the detergent is mounted on the wall. It frees up space in the kitchen so you can work more efficiently. The solution also improves the ergonomic conditions, as the staff does not have to lift heavy cans. Finally, it becomes easier washing the floor when the detergent is moved from the floor to the wall.

## A FUNCTIONAL WORKSPACE

Everyone loves a functional working area, but for kitchen professionals, it is especially important. Typically, the liquid detergents are placed next to the dishwasher on the floor, which can make the kitchen feel cramped. In addition to the risk of tripping over the lines and hoses associated with the detergents and appliances, liquid detergents can also cause chemical accidents if they are spilled or when they are refilled.

With the Kiilto Pro MD Block, professionals benefit from a more spacious kitchen by replacing the large canisters with a compact block system that hangs on the wall.

*Always remember to use protective equipment in accordance with the instructions.*

## 3 EASY STEPS HOW TO REPLACE AN EMPTY BLOCK PACKAGING

When the block is empty, the dispenser emits an alarm sound and the red light lights up.

Remove the lid from the new block. It can easily be removed by lifting it in one side.

The new block must be placed so that its hand grips point out towards yourself. Make sure that the block is placed correctly by pushing it all the way down into the dispenser.

## INCREASED WORK SAFETY

All Kiilto Pro MD Block products come in solid, concentrated form, and the dosage is done in a closed system. This reduces the risk of spillage and accidental contact with chemicals.

At the same time, it is safe and easy to replace an empty block packaging with new refill. The concentrated solution also means that the packaging weighs less than liquid detergent, which makes it easier and more environmentally friendly to transport.

## AUTOMATIC DOSING AND IMMACULATE RESULTS

In a professional kitchen, a reliable dishwashing result is a requirement. The dispenser ensures accurate and correct dosing of detergent, which ensures a sparkling clean and spotless result every time.

In practice, this means that the water conditions of the dishwasher are monitored in real time with a sensor installed in the washing tank. The sensor continuously measures the ratio between detergent and water, while the wash cycle is running.

The dispenser dispenses exactly the amount of detergent that is needed. This provides an economical, but also effective use of detergent, which ensures the same result every time. Say goodbye to post-washing and excessive use of detergents!

### DOSING EQUIPMENT

Kiilto Pro MD Block products are dosed automatically using a sensor in the washing tank.

The dispenser is installed and serviced by Kiilto's trained technicians.

#### Dispenser

- LED panel
- Water valve
- Nozzle
- Easy to maintain

## 3 REASONS WHY KIILTO PRO MD BLOCK **IMPROVES** **YOUR WORK IN THE KITCHEN**

### **Off the floor, up the wall**

No more cans, hoses or wires on the kitchen floor!

### **Increased security**

The solid detergent increases work safety by eliminating direct contact with the chemicals.

### **Spotless service without any hassle**

The automatic dosing provides optimized accuracy, ensuring that exactly the amount of detergent needed for a spotless result is used every time.
